

# PARTS KIT “PF” PKPF M-2000 SERIES

## SPECIFICATIONS:

- PKPF is a parts kit designed for M-2000 yard hydrants. It includes draw straps, pivot connectors and nuts, packing nut, valve stem packing, plunger, and O-ring.
- Draw straps are made of high-strength 1040 hot-rolled steel reduces wear and eliminates side pull on the operating rod, resulting in longer life.
- Pivot connector and nuts replaces set screws, that tend to be unreliable. This results in years of easy reliable adjustments.
- The stainless steel rod stem (not included) is polished, which will not cut the Teflon™ packing and packing nut, resulting in longest operating life.
- Self-lubricating plunger prevents rubber from bonding to the valve body, with the longest operating life in a one piece design.
- Swivel parts permit withdrawal of the rod and plunger without ever digging the hydrant up.
